Q) Point $P(5,-3)$ is one of the points of trisection of line segment joining the points A$(7,-2)$ and B$(1,-5)$
Soln: $\overline{AQ} = \overline{QR} = \overline{RB} = \frac{1}{3}\overline{AB}$

Point	X	Y
P	5	-3
A	7	-2
B	1	-5
R	3	-4

TABLE 0: Input Parameters

$$O = \frac{1}{1+\frac{1}{n}}\left(M + \frac{1}{2}N\right) \tag{0.1}$$

$$\implies Q = \frac{1}{1+\frac{1}{2}}\left(A + \frac{1}{2}B\right) = \frac{2}{3}\left(\begin{pmatrix}7\\-2\end{pmatrix} + \frac{1}{2}\begin{pmatrix}1\\-5\end{pmatrix}\right) = \begin{pmatrix}5\\-3\end{pmatrix} \tag{0.2}$$

$$\implies R = \frac{1}{1+\frac{1}{2}}\left(B + \frac{1}{2}A\right) = \frac{2}{3}\left(\begin{pmatrix}1\\-5\end{pmatrix} + \frac{1}{2}\begin{pmatrix}7\\-2\end{pmatrix}\right) = \begin{pmatrix}3\\-4\end{pmatrix} \tag{0.3}$$

$Q = P(5,-3)$ so $\overline{AP} = \overline{PR} = \overline{RB} = \frac{1}{3}\overline{AB}$
$\therefore$ P is one of the two points that trisects the line segment $\overline{AB}$
