Q) Point  $P(5, -3)$  is one of the points of trisection of line segment joining the points  $A(7, -2)$  and  $B(1, -5)$

Soln:  $\overline{AQ} = \overline{QR} = \overline{RB} = \frac{1}{3}\overline{AB}$

Point	X	Y
$P$	5	-3
$A$	7	-2
$B$	1	-5
$R$	3	-4

TABLE 0: Input Parameters

$$\overline{MN} \text{ to be split into ratio } 1:n \quad O = \frac{1}{1 + \frac{1}{n}} \left( M + \frac{1}{2}N \right) \quad (0.1)$$

$$Q = \frac{1}{1 + \frac{1}{2}} \left( A + \frac{1}{2}B \right) = \frac{2}{3} \left( \left( \begin{matrix} 7 \\ -2 \end{matrix} \right) + \frac{1}{2} \left( \begin{matrix} 1 \\ -5 \end{matrix} \right) \right) = \left( \begin{matrix} 5 \\ -3 \end{matrix} \right) \quad (0.2)$$

$$R = \frac{1}{1 + \frac{1}{2}} \left( B + \frac{1}{2}A \right) = \frac{2}{3} \left( \left( \begin{matrix} 1 \\ -5 \end{matrix} \right) + \frac{1}{2} \left( \begin{matrix} 7 \\ -2 \end{matrix} \right) \right) = \left( \begin{matrix} 3 \\ -4 \end{matrix} \right) \quad (0.3)$$

$Q = P(5, -3)$  so  $\overline{AP} = \overline{PR} = \overline{RB} = \frac{1}{3}\overline{AB}$

$\therefore P$  is one of the two points that trisects the line segment  $\overline{AB}$
